1. Orbits Cycling

The timing & scoring software for cycling events

Orbits Cycling is the timing and scoring software by MYLAPS, specifically designed for cycling (club) races. We developed the easy-to-use software in cooperation with cycling federations, clubs and timekeepers to ensure it fulfills the needs of our customers. The software can be used for multiple forms of cycling, including road cycling, mountain bike racing, track cycling and other cycling disciplines.

MYLAPS' well-known and widely used Orbits software is now available for timing cycling races. Orbits has been used in the world of motorsports for many years and has now been rebuilt for cycling. With Orbits you can easily time your events in 6 sequential steps:

1. Setup your events
2. Create runs and import participants
3. Time your races
4. Process results
5. Distribute results: print and publish practice and event results and upload results to mylaps.com
6. Manage championships

When you order Orbits Cycling (25R030/1) you will get .exe file via a link or USB stick and your personal serial number.

The following components can be ordered from MYLAPS as options for further expanding Orbits Cycling.

Product:	Product code:
Orbits Cycling temporary license (3 months)	25R031
Camera plugin for the operator	
Custom made track set up for your track/velodrome	Contact MYLAPS tech.support@mylaps.com

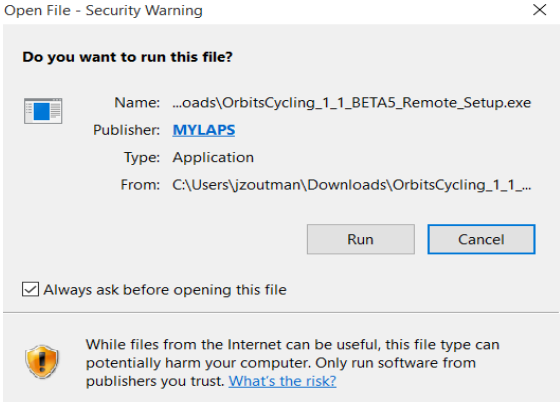

1.1. System requirements

System Requirements	<p>The minimum hardware specifications to run the Orbits Cycling program are:</p> <ul style="list-style-type: none"> • 1 GHz 32-bit (x86) or 64-bit (x64) processor • 1024 MB Memory • Approximately 200 MB of hard disk • Network adapter • Printer and speaker devices • Operating systems: <ul style="list-style-type: none"> ○ Windows 7 ○ Windows 8.1 ○ Windows 10
Administrator	You need to have administrator rights to install and run the program.

1.2. Installation

Installation	<p>The program is available after purchase via a download link. To install the program: You will get the installer (.exe file) via a link or USB stick plus your personal serial number.</p>
--------------	--

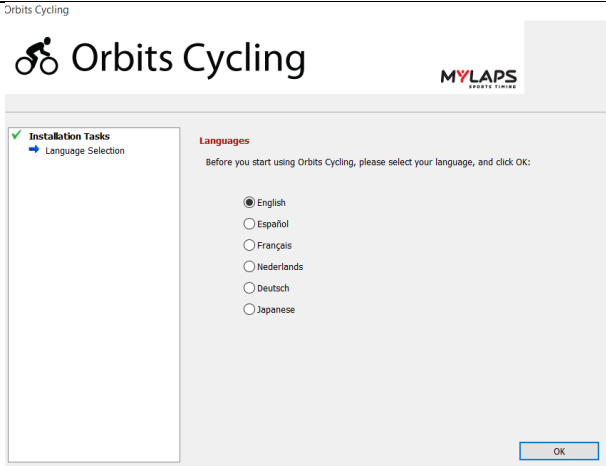

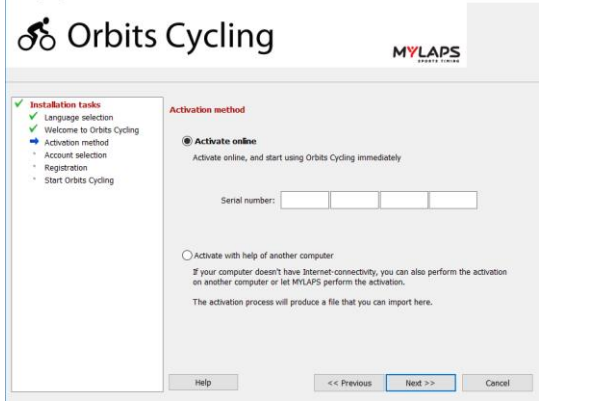

1.3. Downloading

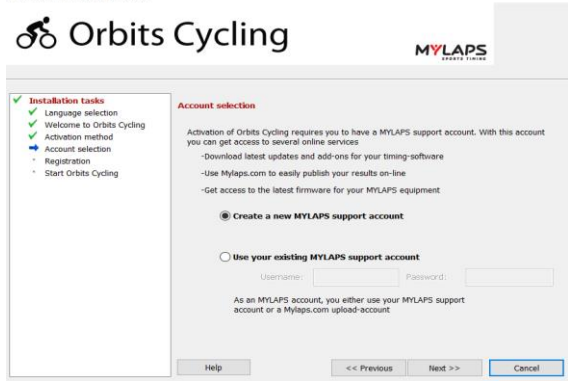

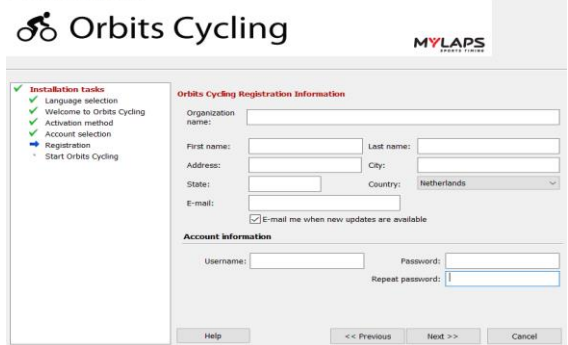

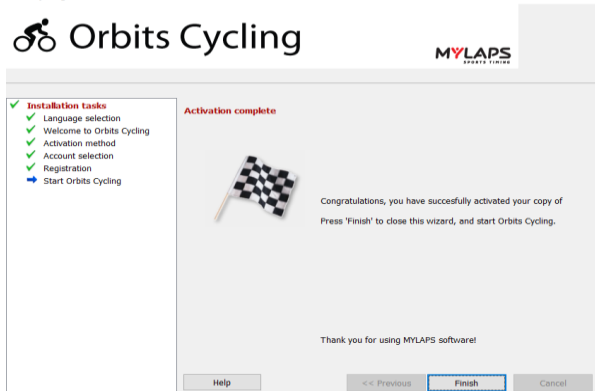

<p>Downloading</p> <ul style="list-style-type: none"> • Click on the download link and save the program onto your PC • Click on the downloaded file to start the installation of the program. • Click on run and follow the instructions of the installation program <p>Shortcuts to Orbits are added under the Start menu and on your desktop.</p>	
---	--

1.4. Activation

Activate the program	<p>You can activate Orbits in two ways:</p> <ul style="list-style-type: none"> • Activate online > this will perform the activation on the computer Orbits is installed on. This way of activating is recommended. • Activate with help of another computer > use this option only, when it is not possible to connect the main computer – the one you installed Orbits on - to the Internet.
----------------------	---

1.5. Activation Online

<p>After you clicked on Finish the activation of Orbits Cycling starts. You can now follow the process.</p>	
Choose your language	
<p>Enter your personal serial number.</p> <p>The serial number can be found in the download link. In the page that follows, you must enter login information from an existing MYLAPS account. This can be one of the following accounts:</p> <ul style="list-style-type: none"> • Account for the MYLAPS support website • Organization account with MYLAPS Results web site that you have used for uploading results to the internet. <p> The organization name you enter, cannot be changed afterwards, and will be visible on the bottom of your print-outs.</p>	

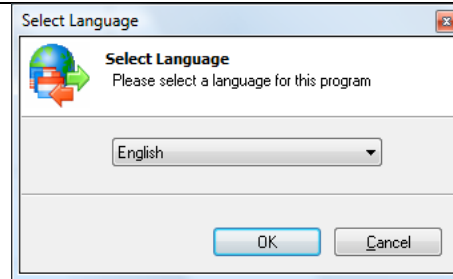

<p>Registration</p> <p>Choose “create a new MYLAPS Support account”</p> <p>If you already created an account, login with your username and password.</p>	<p>Orbits Cycling Activation Wizard</p> 
<p>Fill in all your details</p>	<p>Orbits Cycling Activation Wizard</p> 
<p>Once you have entered the registration information, the wizard is complete. You can start Orbits Cycling by clicking the ‘Finish’ button.</p>	<p>Orbits Cycling Activation Wizard</p> 

1.6. Activate with another computer

<p>To activate with another computer, choose 'Activate with help of another computer' in the 2nd step of the wizard and click 'Next'.</p>	 <p>The screenshot shows the 'Orbits Cycling' activation wizard. On the left, a progress bar indicates the steps: 'Testkeuze' (checked), 'Welkom bij Orbits Cycling' (checked), 'Activeringswijze' (selected), 'Accountkeuze' (unchecked), 'Registratie' (unchecked), and 'Orbits Cycling starten' (unchecked). The main panel is titled 'Activeringsopties' and shows two options: 'Online activeren' (radio button) and 'Activeren met behulp van een andere computer' (radio button, selected). Below the selected option, there is a text box for 'Computercode' containing the value 'TNGL-6904-46'. Instructions in Dutch explain that this code is used to activate the software on a computer without internet access. At the bottom, there are buttons for 'Help', '< Vorige', 'Volgende >', and 'Afmaken'.</p>
<p>The wizard will provide you with a computer code that you will need during the activation process. Write down that computer code, and visit http://activate.amb-it.com/ on a computer with Internet connectivity.</p>	 <p>The screenshot shows the next step in the wizard, titled 'Activeren met behulp van een andere computer'. It displays the 'Computercode' 'TNGL-6904-46' and provides instructions in Dutch to visit the website 'http://activate.amb-it.com/' to enter the code and download the license file. Below the instructions, there is a text box for 'Licentiebestand' and a 'Bekijken' button. At the bottom, there are buttons for 'Help', '< Vorige', 'Volgende >', and 'Afmaken'.</p>
<p>On the website enter your serial number and the generated computer code. The file that contains your license information can be saved on a USB storage device. The website will provide a small license file. With that file, return to the computer with Orbits Cycling, and import the generated file into the wizard by clicking the 'Browse' button. If the file is OK, the Next button will be enabled. Click it to complete the activation process. Orbits Cycling is now fully registered and will be started as soon as you press the finish button</p>	 <p>The screenshot shows a dialog box titled 'Import license file:'. It contains a text input field and a 'Browse' button. Below the input field, there is a large empty space, likely for a file preview or additional instructions.</p>

The program supports multiple languages. The choice of language can be changed before, or after the race. The language can be changed by selecting **Help – Change Language**, followed by selecting the required language from the drop-down list. If your language is not listed, please contact MYLAPS for the availability.

The Orbits Cycling program features an in-depth built-in Windows Help File accessible by selecting **Help – Contents** or pressing 'F1' in the program.

1.7. Start Orbits Cycling

After you activated Orbits Cycling by clicking on "Finish" Orbits Cycling will start. If you already downloaded Orbits Cycling, it can be started by double-clicking the Orbits Cycling shortcut icons on the Windows desktop or via the Windows Start button. Orbits Cycling can be found under Programs -> MYLAPS Sports Timing -> Orbits Cycling.

The Orbits Cycling software consists of two programs, the Orbits Cycling interface and the Orbits Cycling server. The Orbits Cycling server is running in the background and is started automatically when you start the Orbits Cycling program.

The Orbits Cycling server is a separate program running in the background. It handles the communication with the MYLAPS decoder, stores the passings and calculates the results. When the Orbits Cycling server is running, the "red cycling" icon will appear on the Windows taskbar at the bottom right part of your screen. This server should always be running when you use Orbits Cycling.

The visible parts of the program, the Orbits Cycling user interface, are separate from the Orbits Cycling server. This means that if the Orbits Cycling interface is accidentally shut down, the server is still running and decoder records will continue to be stored and processed. After restarting Orbits, the race can be continued without loss of data. The server is started automatically when the Orbits Cycling program is started. When the Orbits Cycling program is shut down, the Orbits Cycling server will keep running. Shutting down the server is possible by clicking the right mouse button on the server icon and selecting **Exit Orbits Cycling Server** or click on the icon when it is requested to shut down after finishing Orbits Cycling.

The Interface consists of six sections – six tabs:

Setup> In this section you can schedule race events, perform the system setup, monitor the system status and connect to your decoder(s).

Registration> In this section you can manage your time schedule and enter competitor data. Orbits Cycling uses a database to store all known competitors.

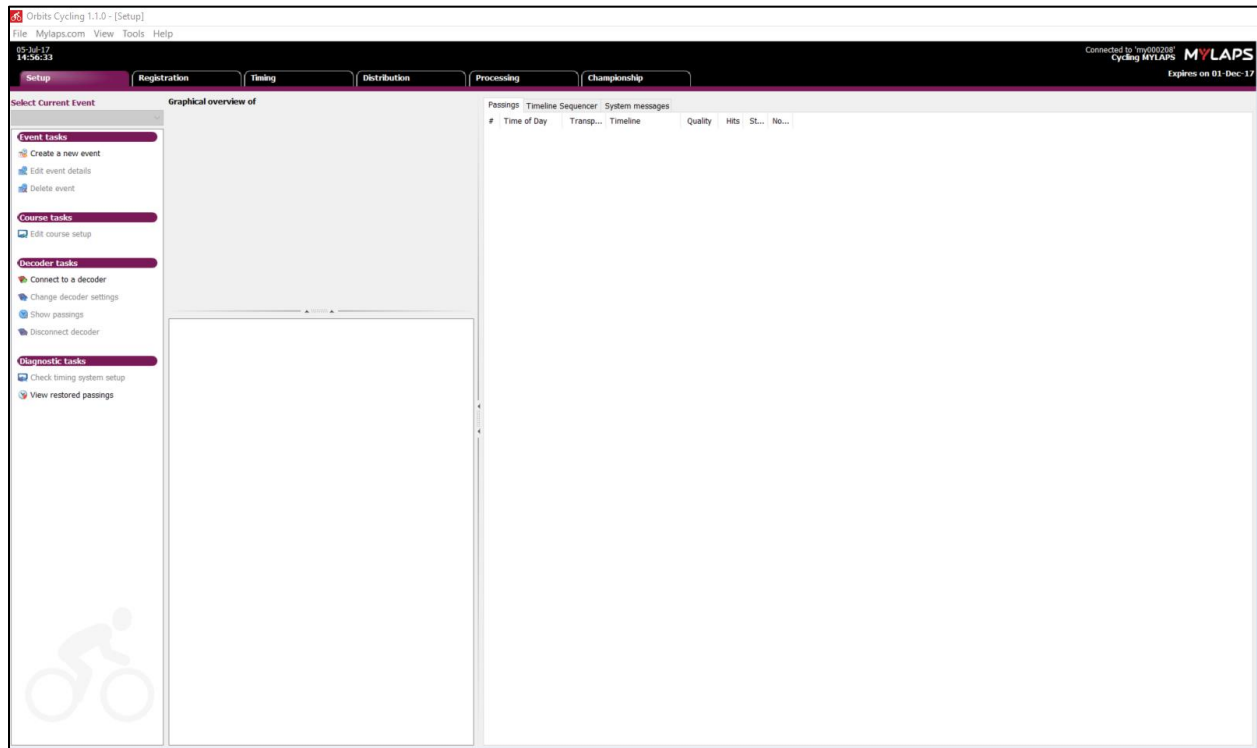

Timing> The timing section gives access to functions that are relevant during different stages of a timed run, e.g. functions related to runs, competitors in a run and passing data.

Distribution> In this section you can upload your results to MYLAPS.com

Processing> This section includes the functionality to organize run results and is used after a run has finished. The processing section hosts different functions like printing results, creating starting grids, assigning points to a run and merging results.

Championship> This championship section includes the functionality to organize and manage the championship standings.

Default overview Orbits Cycling

2. Setup

Click on the Setup tab

	<p>In this section, you find:</p> <p>Event tasks Create a new event Edit event details Delete event</p> <p>Course tasks Edit course setup</p> <p>Decoder tasks Connect to a decoder Change decoder settings Show passings Disconnect decoder</p> <p>Diagnostics tasks Check timing system setup View restored passings</p>
--	--

Event tasks

Open the event setup page of the program by clicking on the **Setup tab** at the top of the program or the View menu.

Orbits Cycling program stores the race result per event. This means that prior to each event you hold, a new event must be created in Orbits Cycling. Since an event is run at a course, you also need to specify your timing system setup. The current selected event is displayed at the top left of the screen.

2.1. Create a new event

You can create a new event from the Event Setup page. Click on **Create a new event** to start the 'New Event wizard'. Now the wizard will guide you through this process.

You can specify the following info on the first page of the wizard.

Event Name:

The name of the event.

Begin Date and End Date:

The start and the end date of the event.

Event Footer 1, 2, 3, 4

The text that should be displayed on the footer of the printouts.

In the event footer, you can add of the organizer, timer, date etc.

The wizard will ask which system setup you are using.

You have the option to

- Create a new course
- Select a setup that is used at previous events.

We start with "create a new course"

Photocell Separation: ms

<< Back Next >> Cancel

Name

The name of the course. E/g you can choose the name of the track or location.

Length

The length of the course is used to calculate the speed shown on the qualifying and race results. Depending on unit of the course length specified (km or miles) the speed (during the race and in the results) will be shown in km or miles.

Use Photocells

Select this option when you want to use photocells as backup time keeping system. Connect the photocells to the start/finish decoder.

Photocell Timeout:

When photocells are connected to the decoder, Orbits Cycling uses the photocell inputs as a backup source for timing. If a competitor with a transponder is passing the finish line, Orbits Cycling will receive both photocell time and transponder time from the decoder, and assign them to the same passing. If a competitor without a transponder passes the finish line, Orbits Cycling only receives a photocell time and will ask you to identify the competitor number.

The photocell timeout is used to set the time Orbits Cycling will wait for a transponder input after receiving a photocell input. The value is default set to 2000msec. The lower this value, the sooner Orbits Cycling will generate an alarm if a competitor without a transponder is detected by the photocell.

When you click on default, all settings will be set to the original settings.

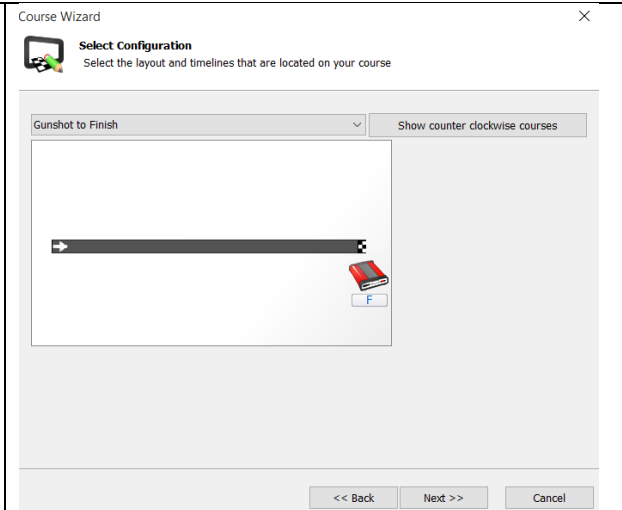

Photocell separation:

The separation is used by Orbits Cycling to determine whether a photocell time can be assigned to a transponder passing time. The smaller this value, the more accurate Orbits Cycling will be able to detect competitors without a transponder. If the separation is set too small, a competitor with a transponder, passing the finish line, will also generate a photocell time, for which Orbits Cycling will ask you to identify the competitor number.

Select configuration

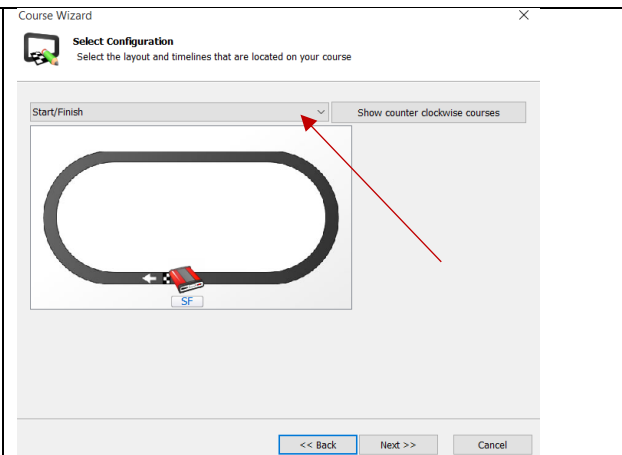

After you filled in all General details of your course, you must select the course configuration. Depending on the number of timelines on your course you can select your configuration from the list. The following configurations are installed by default.

The course layout shows the timelines on the course. Each timeline has a unique name in this configuration. Orbits Cycling has several built-in configurations available. If your configuration is not listed, please contact your local MYLAPS office

Choose your timeline

When you open the pull-down menu, you can choose between different timelines

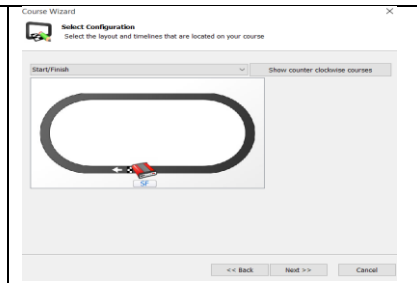

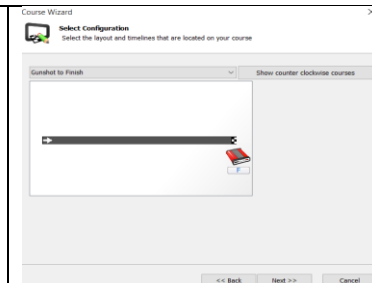

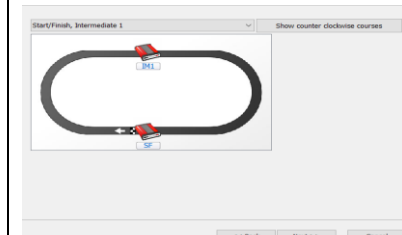

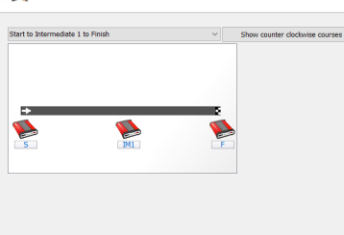

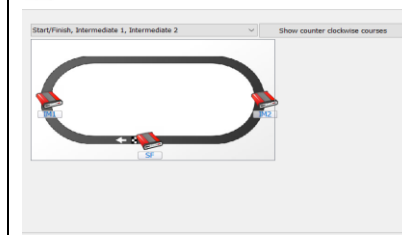

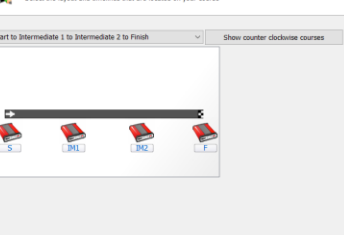

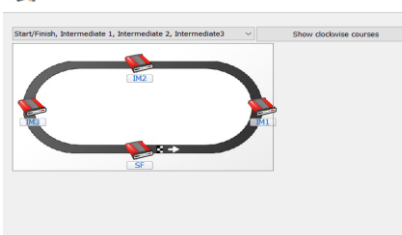

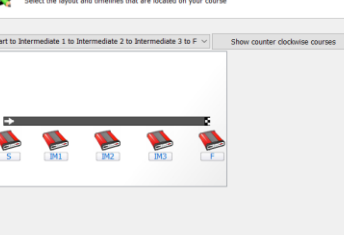

The different timelines:

1 Timeline

Orbits offers the following configurations with 1 timeline.

- Gun Shot to Finish
- Start/Finish

<p>2 Timelines</p> <p>Orbits offers the following configurations with 2 timelines.</p> <ul style="list-style-type: none"> Start to Finish Start/Finish, Intermediate 1 		
<p>3 Timelines</p> <p>Orbits offers the following configurations with 3 timelines.</p> <ul style="list-style-type: none"> Start to Intermediate 1 to Finish Start/Finish, Intermediate 1, Intermediate 2 		
<p>4 Timelines</p> <p>Orbits offers the following configurations with 4 timelines.</p> <ul style="list-style-type: none"> Start to Intermediate 1 to Intermediate 2 to Finish Start/Finish, Intermediate 1, Intermediate 2, Intermediate 3 		
<p>5 Timelines</p> <ul style="list-style-type: none"> Orbits offers the following configurations with 5 timelines. Start to Intermediate 1 to Intermediate 2 to Intermediate 3 to Finish 		
<p>If you want your track clockwise, you first click on "show clockwise courses" then you select the configuration. You can choose "clockwise" in the configuration step. The arrow will be shown clockwise.</p>		

After you chose your timeline, apply the course set up.

After you select a timeline, click on “next” to fill in the section names and length. Depending on your selected configuration the program will ask you to fill in the section names and section length.

Click on the first section, fill in the section name, short name, display, length and extra.

Section name

The description of a logical section.

Short Name

The short description of this logical section will be used in the result screens. It can be 6 characters long.

Display

For this section, you can choose between “Time, Speed or Time and speed”

Length

Length of the section. This number must be very accurate, as it will be used in speed calculations. This number will either be in kilometres or miles depending on the used length unit (kilometres or miles). The length will be from the first timepoint to the second. From the second to the third etc.

Extra

For this section, you can choose between “best lap section or none”

An overview of your set up will follow. After clicking “finish” all your settings are applied.

We can arrange a custom-made track set up for your track/velodrome. Please contact us info@mylaps.com

Decoder tasks

2.5. Connect to a decoder

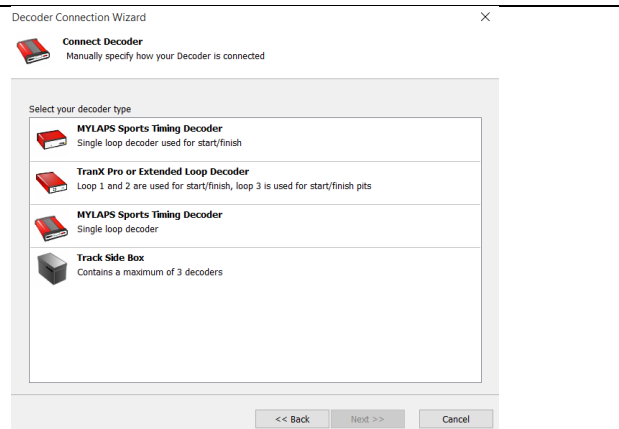

After you have created your event and configured your timing system setup, you can select your ProChip decoders.

To connect to a MYLAPS decoder, you can double click on a timeline, or choose to register a new decoder from the system setup tasks. Now the 'Decoder Connection Wizard' will open. The wizard first scans the network for available decoders. On the first page, all decoders that are found in the network are listed on the screen.

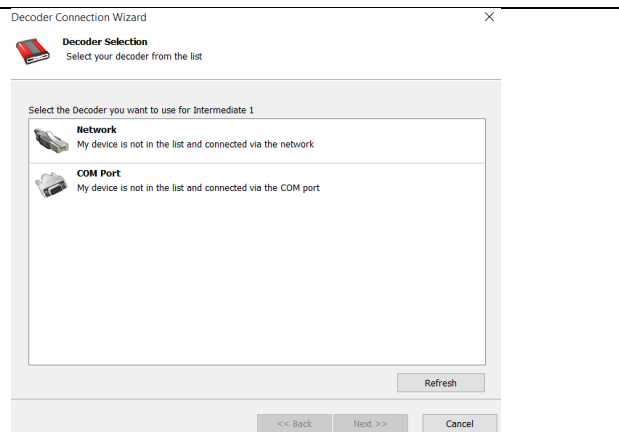

Now the 'Decoder Connection Wizard' will open. The wizard first scans the network for available decoders. On the first page, all decoders that are found in the network are listed on the screen.

Select the decoder you want to use and click on the **Next** button.

If you get this screen, you are not connected to a decoder/no decoder can be found.

Network

If your decoder is connected to your network, select your decoder – click next.

If your decoder is connected to your network, but not in your list, you must add the decoder manually by selecting Network option from the selection list and select the type of decoder.

Enter the IP address of the decoder. See connection issues for more info about the decoders IP address

COM Port

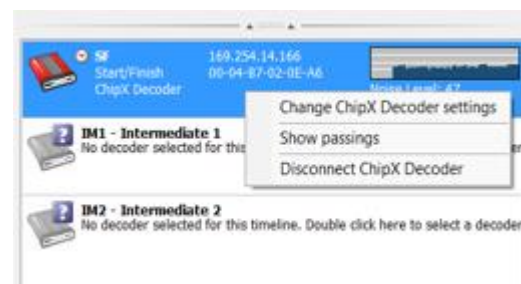

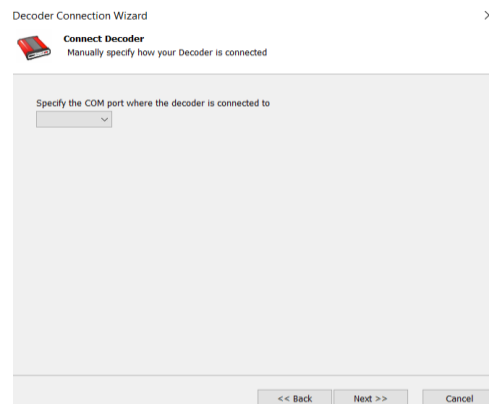

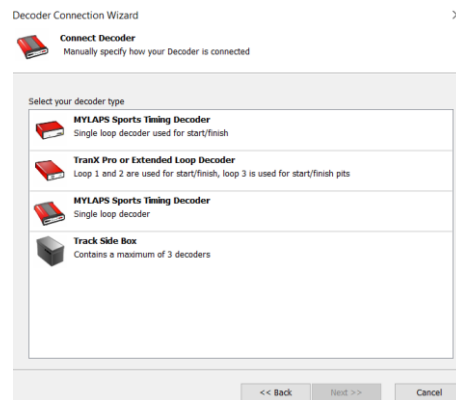

If the decoder is attached to the serial-port of the computer, you must add the decoder manually by selecting the COM Port option from the selection list. Now you need to select the COM Port from the choice list.

Choose your decoder and click to see other settings

- Change ChipX Decoder settings
- Show passings
- Disconnect ChipX Decoder

Change Decoder settings:

You will get the same details as when you double click on the selected decoder.

Show passings:

To analyse the transponders on a timeline you can select the passings tab

- **Hits** The number of hits of the last passing
- **Strength** The strength of the last passing for that transponder.
- **Noise** The noise during the last passing.

The background noise in combination with the signal strength is the most important indicator of the performance of the hardware system. If a decoder is connected to the computer, the background noise will be indicated in the timeline status screen.

The average background noise is sent to the computer by the decoder every five seconds.

Noise values:

0 – The loop is not detected

10-30 noise level is ok

30-50 noise level is medium

50+ noise level is high, not reliable detection.

Disconnect decoder:

If you want to delete a decoder, click on “disconnect decoder”. Select the decoder you want to disconnect and click on yes.

Passings Overview

Network:

Network settings for a type 3 decoder cannot be changed in this Dialog: Settings are changed on the display of the decoder.

Here you find the details of:

- IP address
- Subnet Mask

Serial number is red?

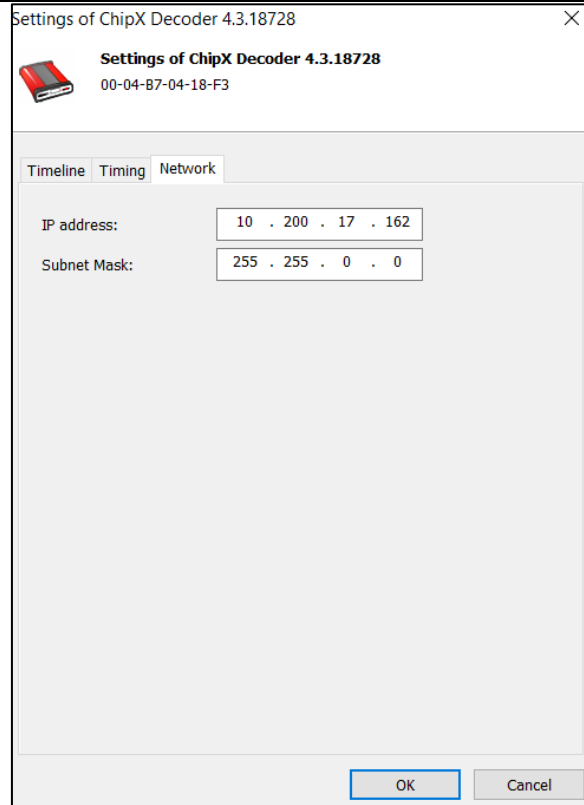

If the serial number is highlighted red, this means you need to upgrade your decoder firmware. To update a decoder, go to the support section of the MYLAPS website or click the button Check for available updates (Online).

IP address has a warning icon?

If the IP Address is not in the same network range as the computer a warning icon will appear. This means that you need to change the IP Address of the decoder. You can do this by right clicking on the decoder and select change decoder settings. You can now connect to your decoder by selecting it from the list and hit the Next button.

My decoder is not in the list?

If your decoder is not listed first check if it is powered on and that all connectors are firmly in place. If it still does not connect it is possible that the decoder has an old firmware version. Manually connect to the decoder by selecting the network option and hitting the **next** button. You can now enter your IP Address, hit the **Next** button to connect. If it connects it means that the decoder firmware needs to be updated. It is possible to do timing in compatibility mode, but some new features will not be supported

3.Registration

Click on the Registration tab

	<p>In this section you find:</p> <p>Group and run tasks Create a new group Copy group Create a new run Import groups and runs Export groups and runs View time schedule</p> <p>Competitor tasks Show competitor database (F3) Import competitors Export competitors Starting sequence Print</p> <p>Other tasks Switch view</p>
--	---

The screen is divided into two main sections:

- The Groups and Runs screen
- The Detailed screen

Group and run tasks

3.1. Create a new group

Start by clicking on "Create a new group" under the group and run tasks.

Now the Group Wizard will start. You first need to enter the group name and group description

Here are some examples of group names.

- Boys
- Girls
- Man
- Woman

The screenshot shows the 'Create a new group' dialog box. It has a title bar 'Group wizard' and a subtitle 'Create a new group' with the instruction 'Enter the group name and description'. The 'General' section contains a 'Group name' field with 'New group' entered and a 'Description' text area. A note at the bottom states: 'Note: Only competitors listed in a group can be timed during a run.' At the bottom of the dialog are buttons for '<< Back', 'Next >>', and 'Cancel'.

After selecting a new group, you can enter the Time schedule for the group. This time is still flexible and can be changed. This is not the actual start time, but an indication.

Each group prepared for an event can hold a series of runs.

To add a new run to this group, you can click on the **Add Run** button.

Select the "new run"

Give the selected run a name, type, short time, date and start time of the session.

In "type" you can choose:

- Practice
- Race
- Time trial
- Handicap

The screenshot shows the 'Run(s)' dialog box for the 'Boys' group. It has a title bar 'Group wizard' and a subtitle 'Run(s)' with the instruction 'Select the runs for "Boys"'. The 'Time Schedule' section contains a table with columns 'Name', 'Type', and 'Time'. The table has one row: 'New run', 'Race', '09:24 PM'. A red arrow points to the 'Add Run' button below the table. Below the table are buttons for 'Add Run' and 'Delete Run'. The 'Run Details' section contains fields for 'Name' (with 'New run' entered), 'Type' (set to 'Race'), 'Short Name', 'Date' (set to 'Saturday, May 20, 2017'), and 'Time' (set to '09:24 PM'). There is an 'Advanced' button next to the time field. At the bottom of the dialog are buttons for '<< Back', 'Next >>', and 'Cancel'.

Click on the **Advanced** button to enter the detailed run settings

- General
- Timing
- Categories

General

Here you fill in all general details about your new run.

Timing

Start Method

This property indicates how the start of the race is defined. The possibilities are:

- **Start on Gunshot** > the elapsed time is measured from the dropping of the Gunshot. A session can also be started using an external start pulse connected to the photocell 2 input of the MYLAPS decoder. The external start pulse will result in a Gunshot passing to be inserted. Run must be in warm-up mode to activate this function
- **Staggered Start** > each competitor has his own starting time, triggered by passing the start/finish line.

First Passing

- None
- Counts as completed lap
- Counts as completed lap, calculates lap time from gunshot

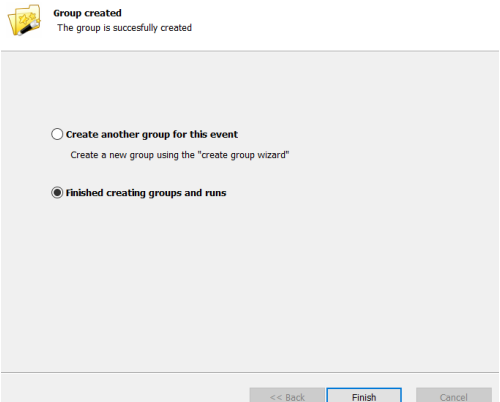

First passing

Normally the first two passings will count as one lap (one passing for starting and one passing for completing the first lap). If this option is set to Count as completed lap, the first passing of the start/finish line of each vehicle will count as the first completed lap.

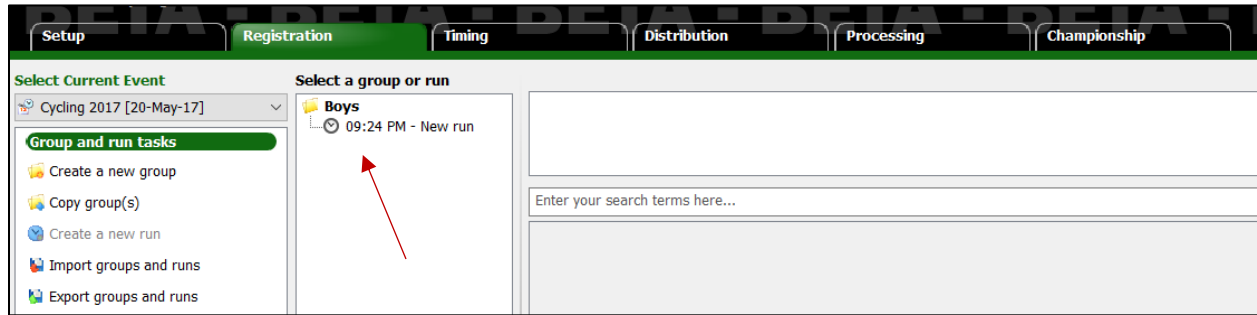

Whether to count the first passing is dependent on several factors such as the distance between the starting location and the start/finish line (the detection loop).

⚠ You should try to grid the competitors at least 5m/15ft from the detection loop to prevent premature detection.

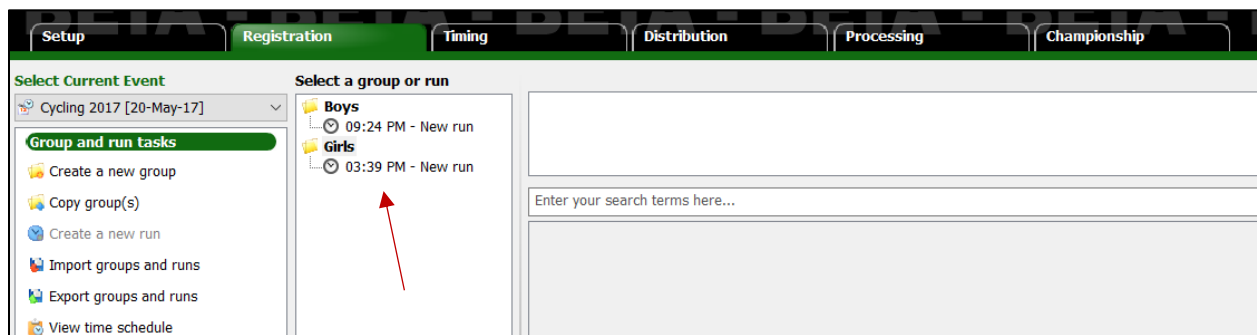

Minimum lap time:

<p>Lap times recorded below the specified minimum lap time will be automatically invalidated and are displayed in red in the passing screen. An invalidated passing will count as a lap, but will not be used for determining best lap time. The minimum lap time value can be changed at any time, also when timing a session.</p> <p>⚠ Passings with lap times that are faster than 3 seconds will be automatically deleted.</p>	
<p>Create another group for this event.</p> <p>If you want to use the same run details for another group, click on "create a new group" and click to you see "create another group for this event"</p> <p>The same details will be saved, an extra group has been made.</p>	 <p>Group wizard</p> <p>Group created The group is successfully created</p> <p><input type="radio"/> Create another group for this event Create a new group using the "create group wizard"</p> <p><input checked="" type="radio"/> Finished creating groups and runs</p> <p><< Back Finish Cancel</p>

After you created a new run, the run will show in the groups a run screen

An extra group with the same run details.

3.2. Copy groups

Group(s) from a previous event or the complete schedule including the competitors and merges can be copied in the current event using the Copy group(s) option in the task menu of Group and Run.

Select the group(s) and click on next.

Options:

- Copy competitors
- Reset competitors' transponder during copy
- Merges

The image displays two sequential steps of the 'Copy groups wizard' dialog box.

Step 1: Select an event
 The dialog box is titled 'Copy groups wizard' and 'Select an event'. It prompts the user to 'Select the event to copy from'. A dropdown menu shows 'Cycling 2017 [20-May-17]'. At the bottom, there are buttons for '<< Back', 'Next >>', and 'Cancel'.

Step 2: Select groups
 The dialog box is titled 'Copy groups wizard' and 'Select groups'. It prompts the user to 'Select the groups to copy'. There are two checkboxes: 'Boys' and 'Girls', both of which are checked. Below this, under the 'Options' section, there are three checkboxes: 'Copy competitors' (checked), 'Reset competitors transponder during copy' (unchecked), and 'Merges' (unchecked). At the bottom, there are buttons for '<< Back', 'Next >>', and 'Cancel'.

3.3. Create a new run

Click on create a new run.

Select a group you want to add the new run to.

You are now creating a new run in the selected group. Fill in all details:

General:

Name – choose the name of your run

Short name – choose a short name

Date – on which date and time

Type – choose for

Practice/race/time trial/handicap.

Timing:

Start method – choose for start on gunshot or staggered start.

First passing

Minimum lap time.

Click on ok and a new run in your selected group is created.

The screenshot shows the MYLAPS software interface. On the left, a menu titled 'Group and run tasks' includes options: 'Create a new group', 'Copy group(s)', 'Create a new run', 'Import groups', 'Export groups', and 'View time schedule'. A tooltip 'Select a group to add the new run to' is visible over the 'Create a new run' option, showing a list with 'Boys' and 'Girls'. On the right, a 'Run Settings' dialog box is open, titled 'Create a new run in Boys'. It has two tabs: 'General' and 'Timing'. The 'General' tab is active, showing fields for 'Name' (with 'New run' entered), 'Short Name', 'Date' (set to 'Monday, May 22, 2017' at '08:16 PM'), and 'Type' (set to 'Race'). A note states: 'Note: Used for column name in merged result'. At the bottom of the dialog are buttons for 'Apply and create another', 'OK', and 'Cancel'.

3.4. Import groups and runs

Group and run information stored in xml file can be imported in Orbits Cycling. For details about the format, see Appendix B – File Formats

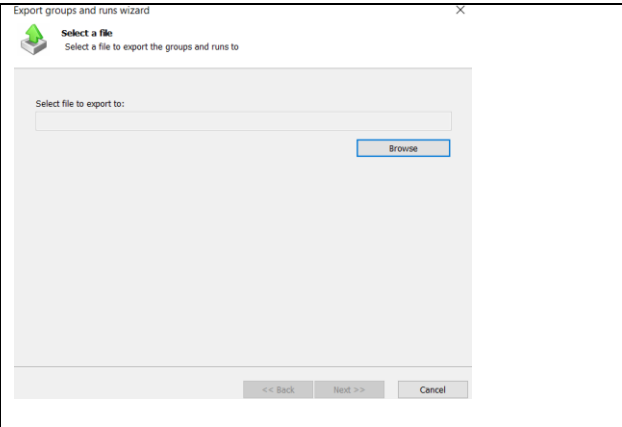

Select a file to import

The screenshot shows the 'Import groups and runs wizard' dialog box. It has a title bar with a close button. Below the title bar, there is a red arrow icon and the text 'Select a file' and 'Select a file that contains the groups and runs'. A large text area contains the instruction 'Select the file to import:'. Below this is a text input field and a 'Browse' button. At the bottom of the dialog are buttons for '<< Back', 'Next >>', and 'Cancel'.

3.5. Export groups and runs

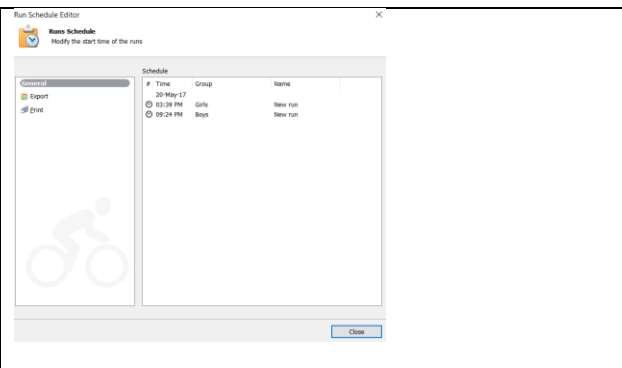

Group and run information stored can be exported in an xml format. For details about the format, see Appendix B – File Formats

Select a file to export to.

3.6. View time schedule

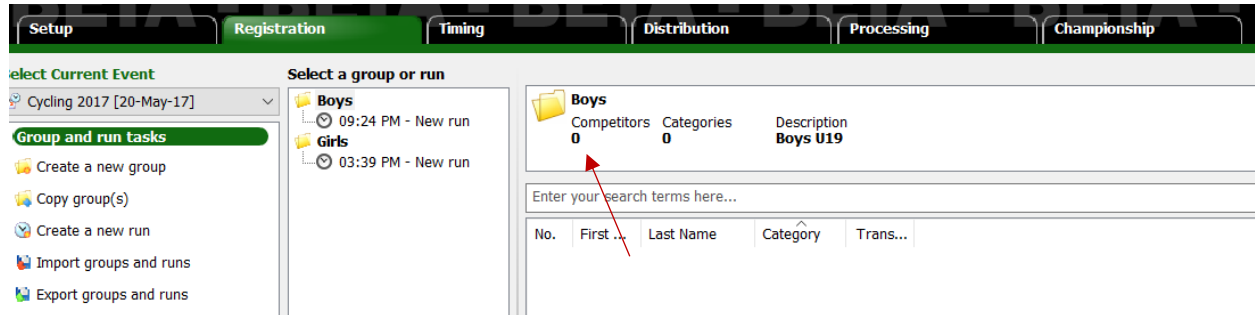

The time schedule can be consulted, exported or Printed by selecting the View time schedule.

Competitor tasks

3.7. Competitor database (F3)

If you click on group e/g “Boys” you see a detailed screen.

You see no competitors and no categories.
How to create competitors and categories?

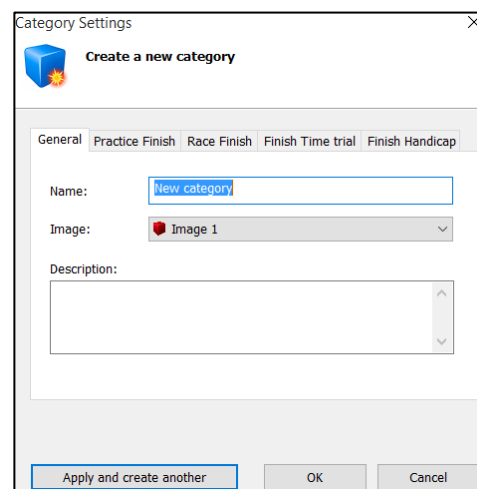

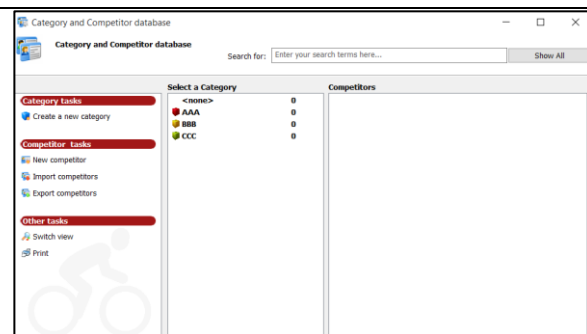

Competitor database (F3)

In the competitor database, the competitors are stored in categories. A competitor can belong to only one category. If a competitor competes in more than one, he must be entered separately for each category.

When a category is selected (on the left) in the list, only the competitors in that are shown. When multiple categories are selected, the competitors in the selected categories are shown.

When you press **Show All**, all competitors in the database are shown. A category is created automatically when it is entered for a new or existing competitor.

You can also create a category by right mouse clicking on the list of classes and selecting “Make a new category”.

Make a new category.

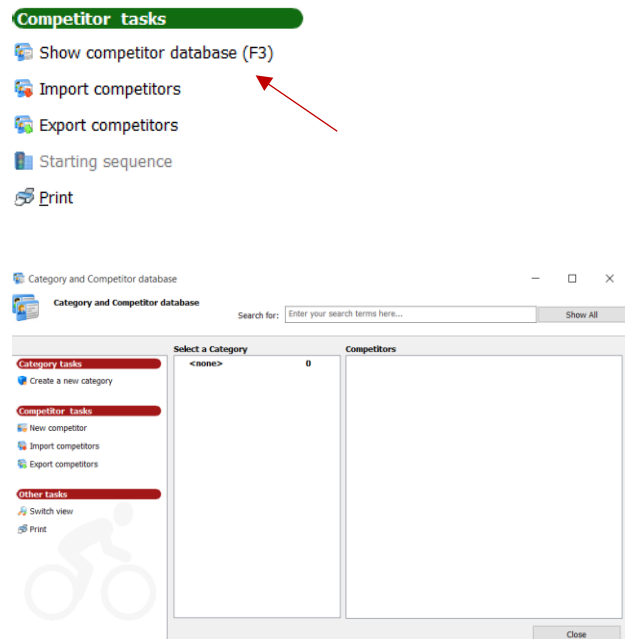

To make identification easy, competitors that are in the same category are marked with the same coloured block.

You already created a group e/g Boys
In this group, you create a category e/g Boys U19

3.8. Create a new competitor

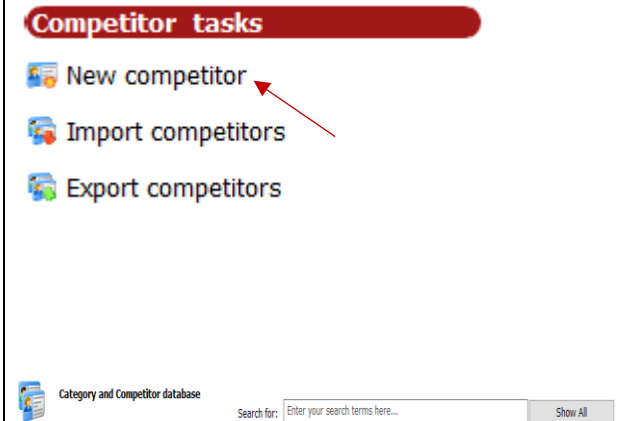

All competitors are stored in one competitor database. This database can be used for every race event. The competitor database can be shown by clicking on the Show competitor database option on the taskbar on the left from the registration screen

To create a new competitor, right click in the competitor screen and select **New Competitor**.

You can search the database for specific competitors using the **Search** bar.

To show all competitors again, click the **Show All** button.

In the competitor database, the competitors are stored in categories. A competitor can belong to only one category. If a competitor competes in more than one, he must be entered separately for each category.

When a category is selected (on the left) in the list, only the competitors in that are shown. When multiple categories are selected, the competitors in the selected categories are shown. When you press **Show All**, all competitors in the database are shown. A category is created automatically when it is entered for a new or existing competitor. You can also create a category by right mouse clicking on the list of classes and selecting **Make a new category**.

To make identification easy, competitors that are in the same category are marked with the same coloured block.

Orbits Cycling accepts 4-digit alphanumeric starting numbers.

Category

In the category drop down box, all categories from the Competitor Database are listed. If a category was selected on selecting **Add Competitor**, this category will be preselected. You can either select an existing category or fill out a new one.

Transponder/2nd Transponder – Pro Chip (Flex)

It is necessary to fill out the transponder number(s) of the competitor. The 2nd transponder field can be used in case a bicycle is equipped with a new transponder during a session.

Bike Reg.

The bike registration number is a unique number for a bicycle (e.g. chassis number). If you do not know this number you can let Orbits generate a unique number for you by selecting **Auto generate**.

⚠ The combination of bike registration number and competitor registration number is unique for each competitor. It is used by Orbits as a key, and cannot be modified. Therefore, it is important to enter this information accurately.

First Name/Last Name

The first and last name fields must be filled out carefully to make the sorting on name work correctly. If you want 'Mc Donalds' to be sorted on 'Donalds', please place 'Mc' in the first name field. In the results on screen and on printouts, the full name will be printed as the full name, with first name and last name after each other. If you want the program to first display the last name and then the first name, please enter the last name in the First Name field and vice versa.

Competitor details

First Name:	<input type="text"/>	Last Name	<input type="text"/>
Comp. Reg:	<input type="text"/>	<input checked="" type="checkbox"/> Auto Generate	

Competitor Reg.

The competitor registration number is a unique number for a competitor (e.g. license number). If you do not know this number you can let Orbits generate a unique number for you by selecting Auto generate.

⚠ The combination of bike registration number and competitor registration number is unique for each competitor. It is used by Orbits as a key, and cannot be modified. Therefore, it is important to enter this information accurately.

Additional data fields

In the additional data fields you can enter any necessary additional data on the competitor. Headings for all additional data fields can be named in the General Settings (Tools->Options... -> General from the main menu). For three of the additional data fields the value can either be entered by hand or selected from a drop-down box, which contains all previous entries. Points will be given after the race.

To enter another competitor, select the **Next** button. Once all competitors are entered select the **OK** button.

3.9. Managing competitors

By clicking the right mouse button on a competitor in the Competitor database a pop-up menu will appear for adding, editing or deleting competitors.

- Add competitors to selected group
- New competitor
- Edit competitor "E/g Joan Neill"
- Delete competitor "E/g Joan Neill"
- Reset transponders
- Select all
- Choose columns

Add new competitors to selected group:
You have created groups, categories and competitors.

You now going to add competitors to fill the group.

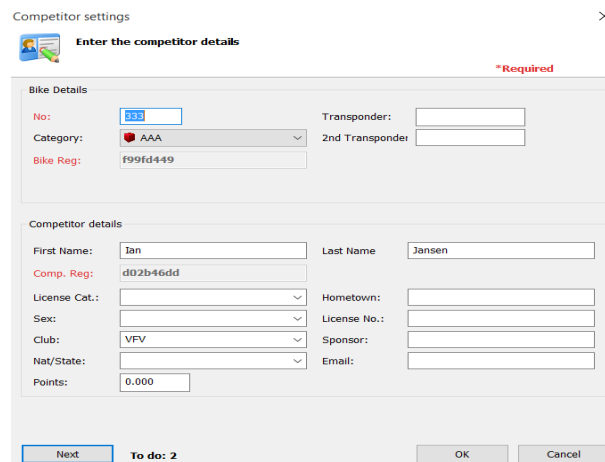

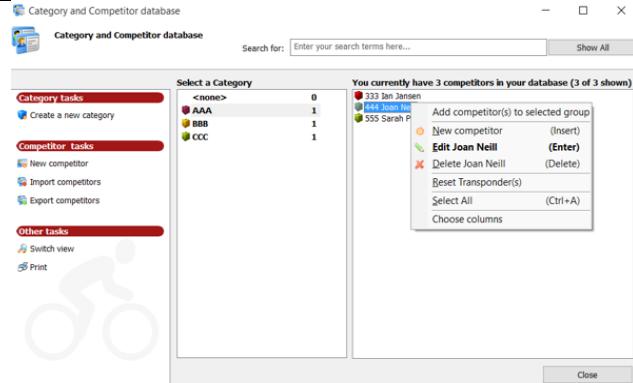

New competitor.

If you want to add a new competitor, click on "add a new competitor" and fill in all details.

E/g Edit competitor "Joan Neill"

If you want to edit a competitor, click on the competitor. The competitor screen will pop up, so you can change the details.

If you selected multiple competitors to edit, all screens will pop up, but you only see one. On the bottom part of the competitor screen you see how many competitors you should have.

Deleting competitor "Joan Neill":

To delete one or more competitors, highlight them, click the right mouse button and select Delete. You will be asked to confirm that you want to delete the selected competitors.

⚠ this question will only be asked once, even if you have selected multiple competitors for deletion.

Select all:

By clicking "select all" all competitors will be selected.

You can choose if you want to add them all to a selected group, edit, delete or reset the transponders for all of them.

Reset transponders:

If you want to reset them, you can choose to change them per competitor or for a selected group.

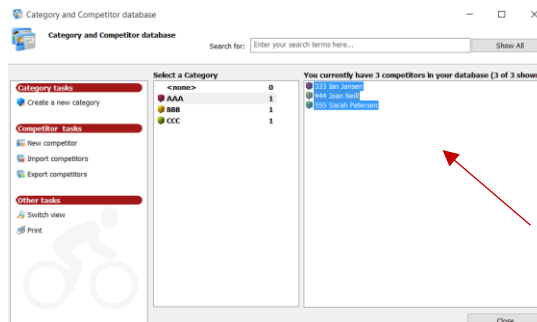

Confirm competitor delete

Delete the selected competitor(s)

4.3. Clear results

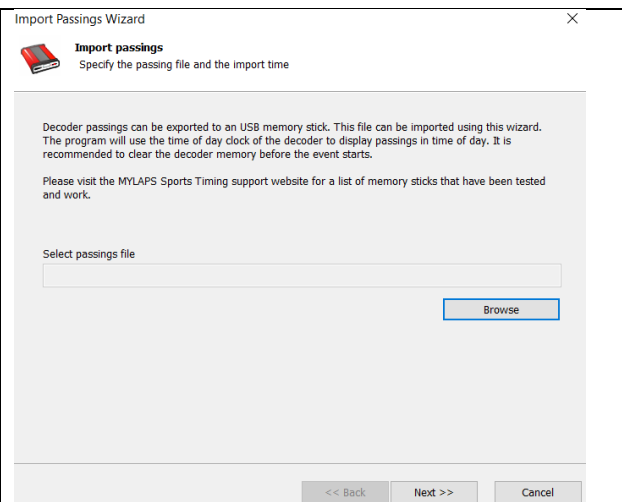

All results will be cleared. After you cleared the results, it is possible to import passings from a new file.

4.4. Import passings

Decoder passings can be exported to an USB memory stick.

Select your file which you want to import. The program will use the time of day clock of the decoder to display passings in time of day. It is recommended to clear the decoder memory before the events starts.

Make sure your USB memory stick is FAT 32 with a maximum of 2 GB.

Import Passings Wizard

Import passings
Specify the passing file and the import time

Decoder passings can be exported to an USB memory stick. This file can be imported using this wizard. The program will use the time of day clock of the decoder to display passings in time of day. It is recommended to clear the decoder memory before the event starts.

Please visit the MYLAPS Sports Timing support website for a list of memory sticks that have been tested and work.

Select passings file

Browse

<< Back Next >> Cancel

4.5. How to start a run

After preparing the race event, you can start racing. This part of the manual describes the process of starting a race and the actual timekeeping activities. All of this takes place in the **Timing** tab of the program. When the **Timing** tab is selected, it will look like the figure below.

The screen is divided into three main sections:

- The Passings screen
- The Results Screen
- The Lap Chart

The screens can be adjusted by selecting the  tool and dragging it to the preferred position. You can hide and show the  tool by clicking it with the left mouse button.

To start a practice or race session, check if the right track and event are selected in the title bar. To change the selected track and/or event go to the registration screen and select an event from the choice box on the top screen. Before you can start a session you first must open the session. This can be done from the selection box on the top of the timing screen. Select the run from the selection list.

A run can be started and stopped in the Timing tab; passings will be collected and displayed. By pressing the start pistol (or F5 on the keyboard) the timing can be started. By pressing the checkered flag (or F8 on the keyboard) the timing can be stopped. There are two ways to start and stop timing: Each category can be individually started and finished by selecting one category. All categories together can be started and finished by selecting the run.

A single run can have multiple athletes in different categories. In some situations, a category must complete a different number of laps or ride a longer or shorter period than another category. Each category can now have a different start or finish time.

External start

After starting a session with the Play icon, the Start gun flag will be initialized automatically when the decoder receives a Photocell 2 input from the Auxiliary port. Please check your hardware manual for wiring details.

The start gun, red and finish flag are applicable to all categories in a run when you have selected the run itself. If you have selected just one category out of the ones you have in that specific run, then the start gun, red and finish flag will apply to that specific selected category.

Start Timing of selected run

Select the play icon to start the timing of the run in warming up mode. When this is active the laps will appear in the Passings Screen, but will not count for the results.

Start Gun (F5)

Select the Start Gun to start the race or to change from a red flag situation back to a normal race mode. A stopped race can also be restarted by selecting the Start Gun.

Red flag (F7)

Select the red flag when a red flag situation occurs. During a red flag situation, the lap count is never increased but the passings will still be registered.

Prime

Select the prime button to start a prime

Finish flag (F8)

After the finish flag is dropped, the next passing by each competitor will be marked as finished and all subsequent passings will be marked as extra and will not affect the race/qualifying result.

Stop

Select the Stop button to stop the timing and scoring for this run. Once a run is stopped, successive transponder passings will not be registered. The run can be restarted by selecting the green flag (or pressing the F5 hotkey).

View Tasks

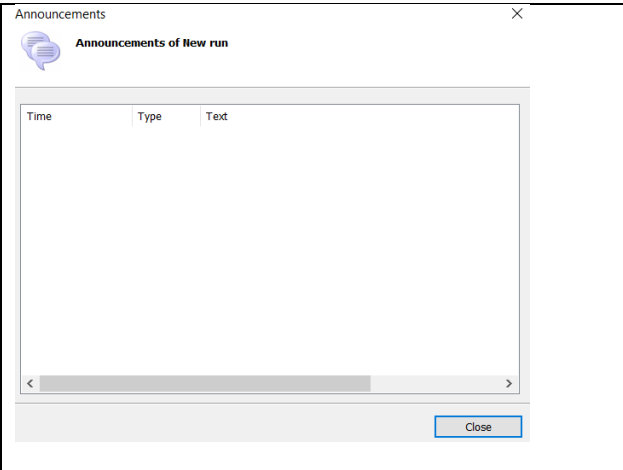

4.6. Show passing monitor

<p> Show passing monitor</p> <p> Hide passing monitor</p> <p>This monitor shows the registered amount of passings</p>

5. Distribution

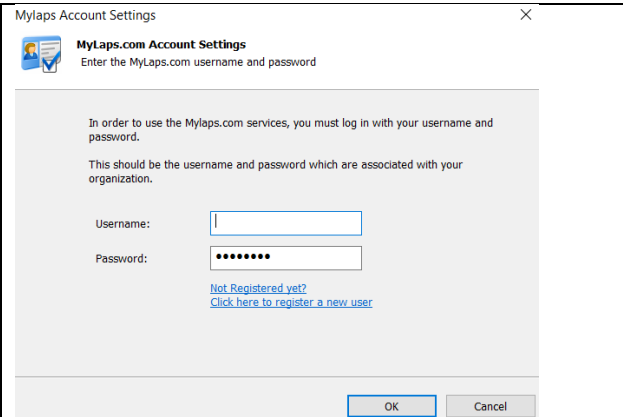

The screenshot shows the MYLAPS software interface. At the top, there is a navigation bar with tabs: Setup, Registration, Timing, Distribution (highlighted in orange), Processing, and Championship. Below the navigation bar, the interface is divided into two main sections. The left section is titled 'MyLaps.com tasks' and contains a list of tasks: Homepage, Upload, and Account Settings. The right section is titled 'In this section, you find' and lists: MYLAPS.com tasks, Homepage, Upload, and Account settings. A red arrow points from the 'Distribution' tab to the 'In this section, you find' text.

MYLAPS.com tasks

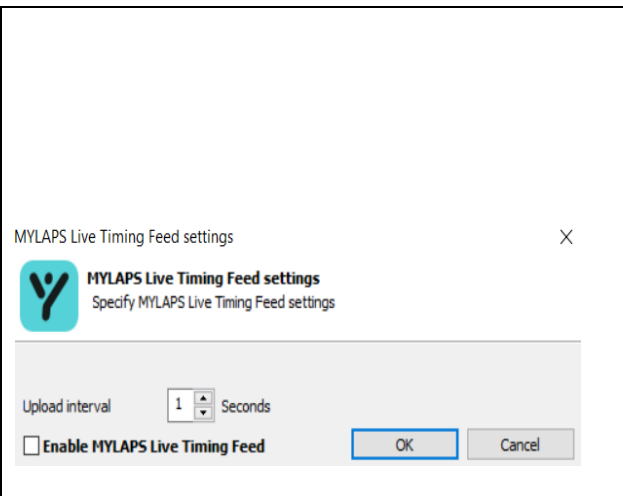

5.1. Homepage

If you select this, you go to the MYLAPS homepage.

5.3. Account settings

<p>If you want to change your account settings, login with your username and password of your organization account.</p>	 <p>The dialog box is titled 'Mylaps Account Settings' with a close button (X) in the top right corner. It features the MyLaps logo and the text 'MyLaps.com Account Settings' and 'Enter the MyLaps.com username and password'. Below this, it states: 'In order to use the Mylaps.com services, you must log in with your username and password. This should be the username and password which are associated with your organization.' There are two input fields: 'Username:' and 'Password:'. The password field is masked with dots. Below the password field, there are two links: 'Not Registered yet?' and 'Click here to register a new user'. At the bottom right, there are 'OK' and 'Cancel' buttons.</p>

5.4. MYLAPS Live Timing Feed

<p>The MYLAPS Live Timing Feed offers a live timing solution in both Speedhive app and website, which is a provisional free service. By enabling the feed, the event will automatically show up in the Speedhive Android or iPhone app.</p> <p>Enable the feed</p> <p>The feed is by default disabled. Click on the link to enable the feed. Check the 'enable MYLAPS Live Timing Feed' box and select the upload interval.</p>	 <p>The dialog box is titled 'MYLAPS Live Timing Feed settings' with a close button (X) in the top right corner. It features the MYLAPS logo and the text 'MYLAPS Live Timing Feed settings' and 'Specify MYLAPS Live Timing Feed settings'. Below this, there is a section for 'Upload interval' with a spinner box set to '1' and the text 'Seconds'. At the bottom, there is a checkbox labeled 'Enable MYLAPS Live Timing Feed'. To the right of the checkbox are 'OK' and 'Cancel' buttons.</p>

6.3. Announcements

Announcements can be used to make notes of official decisions made during a run.
E/g. reason for red flag etc. The announcements are printed in the official race result printout.

To add, modify or delete announcements by selecting Announcements from the Results tasks and right click on the Announcement Screen to select your task from the menu.

Announcements will appear on Official Race Reports and on MYLAPS.com.

6.4. Penalties/Corrections

You can add a penalty or correction to a competitor. Click on right to add, modify or delete a penalty/correction.

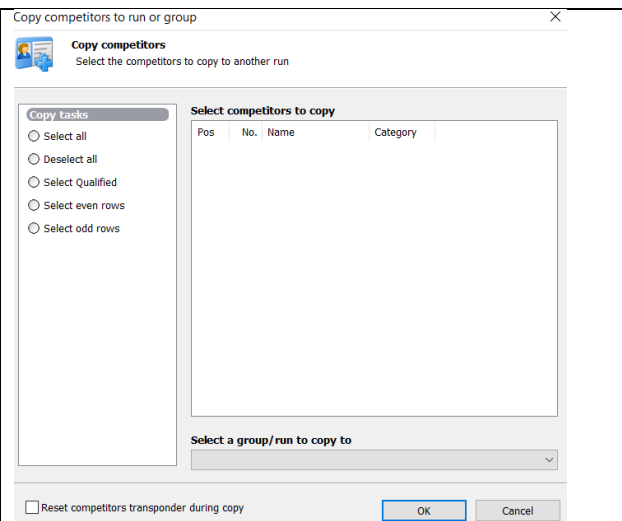

6.5. Copy the competitors

Select the competitors to copy to another run.

From a run or merged result, qualified competitors can be selected and copied to another group or run. Select the competitors you want to copy to another run, in the results screen.

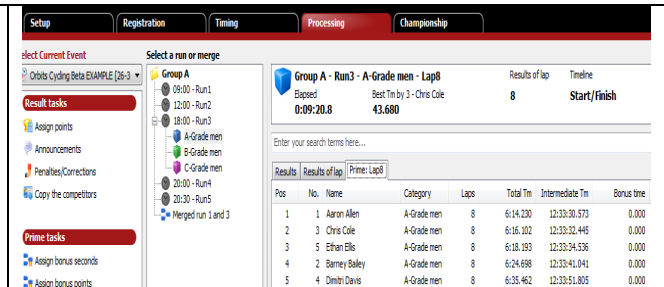

Open the dialog by clicking on Copy the competitors' button, which can be found under results task. In this dialog you can specify which competitors should be copied to another group or run.

Prime tasks

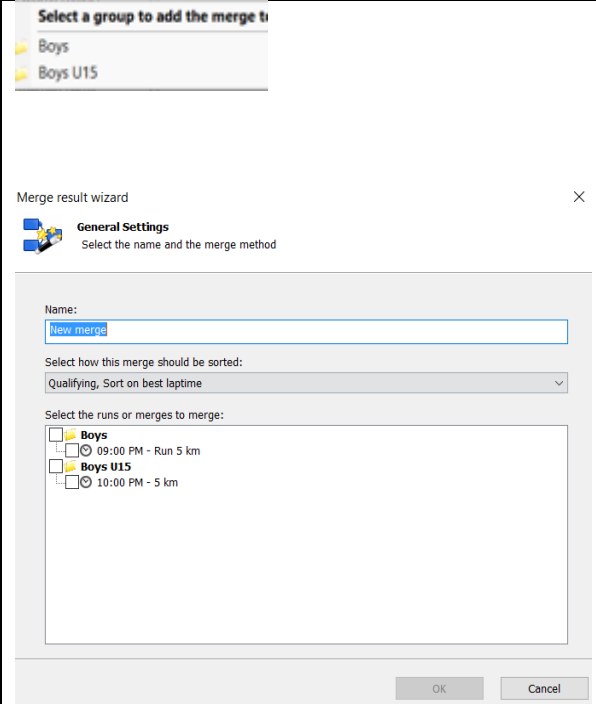

6.6. Assign bonus seconds/points

Points or bonus seconds can be assigned to competitors of a run. Select the prime at one of the categories, at the taskbar there are two new buttons, assign bonus seconds and assign bonus points. A dialog will appear and you can assign bonus points or seconds according to a scheme, this scheme can be used to assign values to a specific position.

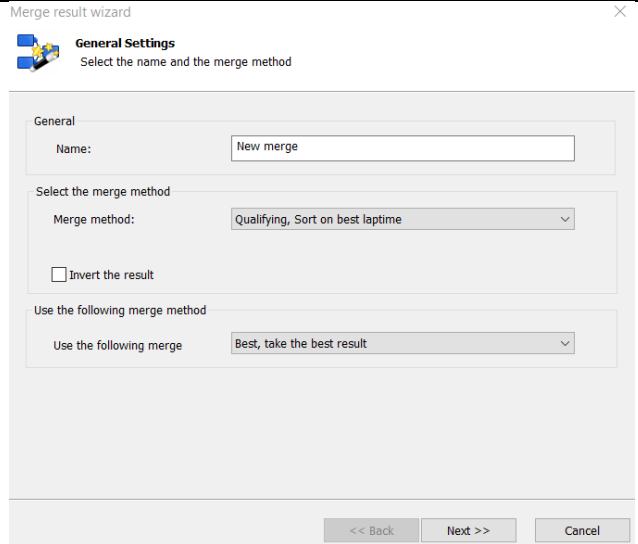

Merged result tasks

6.7. Create a new merge (quick)

<p>Create a group to add the merge to</p> <p>You merge groups, to have an overview of all competitors in a same category. e/g you want an overview of all runs in the category U15.</p> <p>Select the name and merge method.</p> <p>Choose a name for the new merge.</p> <p>Select how this merge should be sorted:</p> <ul style="list-style-type: none"> • Qualifying, sort on best lap time • Race, sort on laps and total time • Most points sort • Least points sort <p>Select the runs or merges to merge and click on ok.</p> <p> Boys - New merge</p>	
---	---

6.8. Create a new merge

<p>General settings</p> <p>Choose a name for the new merge.</p> <p>Specify how the merged result should be sorted.</p> <ul style="list-style-type: none"> • Qualify sort: The merged result is sorted on best lap-time. • Race sort: Results are sorted by highest number of laps and then lowest total time. • Most points sort: Result is sorted on most total points. The competitor with the most points wins. • Less points sort: Result is sorted on less total points. 	
--	--

When you use **merge on points**, you can include a **specific tie solver**:

None: no specific tie solver included

Qualifying: in case of a tie it will look at the best lap time

Race: in case of a tie it will look at the number of laps and total time

Invert the result

Check this button when you want to invert the result.

Merge method

- Best, take the best result. (This is default setting for a merge sorted on best lap time)
- Average, calculates the average result.
- Sum, calculates the sum of the results. (This is default setting for a merge sorted on points or sorted laps)

Select all and click on next.

Select the runs to merge

Select the runs that are going to be merged. By using the arrow buttons, runs can be added to the merge.

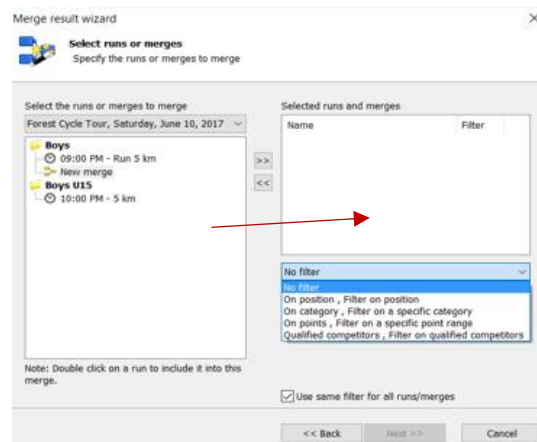

To delete a run from this merge, use the corresponding buttons.

Results filter

The result filter allows you to exclude competitors from the merge. The following filters are available:

- On Position: Only include competitors in the merge that are in the specified range. (Minimum position, Maximum position)
- On Category: Only include competitors in the merge that are in the selected category.
- On Points: Only include competitors in the merge that are in the specified range. (Minimum position, Maximum position)
- Qualified: Only include qualified competitors in the merge.

To specify a filter on a result, select a run or merge from the list and choose the filter from the choice list. Check 'Use same filter for all' if you want to apply the filter for all runs in the merge.

Qualification requirements

This property indicates how competitors can qualify for the merged result.

The possibilities are:

- None: All competitors appear on the result.
- On best lap time: When selected, you can specify a percentage. To appear on the results, a competitor must achieve a lap time of no more than the specified percentage of the best lap time. This only applies to merges sorted on best lap time.
- On average best lap time of top x: When selected, you can specify a percentage. To appear on the results, a competitor must achieve a lap time of no more than the specified percentage of the best lap time. This only applies to merges sorted on best lap time.
- Maximum number of competitors: When selected, you can specify a position. All competitors from the specified position down do not qualify. This applies to race as well as practice results.

Keep not qualified competitors in the merge

If you apply a Qualification Requirement on this merge, not qualified competitors will appear on the merged result. If this option is off, a not qualified competitor will not appear on the result.

Unique Identifier

This is used to identify competitors with the same information in the selected field.

Select all details and click on finish.

6.9. Modify the merged result

If you want to modify the merged result, you will go back to the general settings (6.8)

The screenshot shows the 'Merge result wizard' dialog box with the 'General Settings' tab selected. The title bar says 'Merge result wizard' and 'General Settings'. Below the title bar, it says 'Select the name and the merge method'. The dialog has three main sections: 'General' with a 'Name:' field containing 'New merge'; 'Select the merge method' with a 'Merge method:' dropdown set to 'Qualifying, Sort on best laptime' and an unchecked 'Invert the result' checkbox; and 'Use the following merge method' with a 'Use the following merge' dropdown set to 'Best, take the best result'. At the bottom are three buttons: '<< Back', 'Next >>', and 'Cancel'.

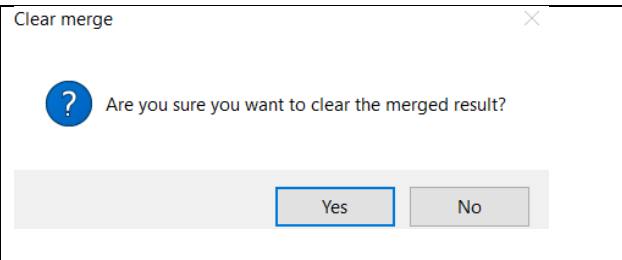

6.10. Calculate the merged result

A merged result can be calculated after all runs are finished (and points are assigned).

 The merged result is not automatically updated when the result of one of the run changes. Click on 'Calculate merged result' to apply the changes.

6.11. Clear merged results

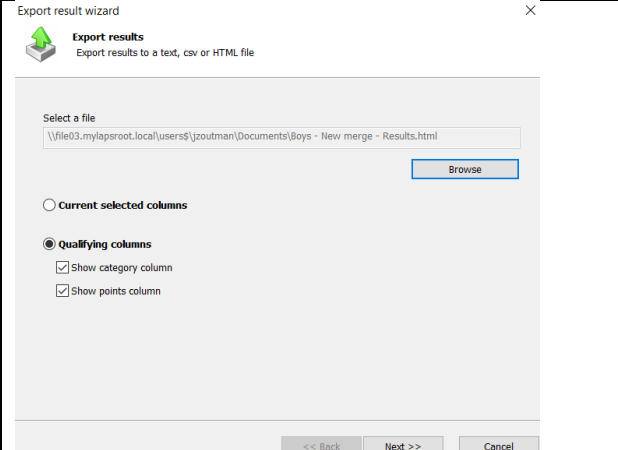

If you want to clear the merged result, click on yes.

The screenshot shows the 'Clear merge' dialog box. The title bar says 'Clear merge'. Inside, there is a blue question mark icon followed by the text 'Are you sure you want to clear the merged result?'. At the bottom are two buttons: 'Yes' and 'No'.

Publish tasks

6.12. Export results to file

<p>Export results to a text, csv or HTML file</p> <p>The results can be exported in three different formats:</p> <ul style="list-style-type: none"> • txt file: The results are exported to a tab delimited text file. • csv file: The results are exported to a comma delimited text file. • html file: The results are exported to a html file. 	
---	--

6.13. Export lap times to file

Exporting lap times to TXT, CSV or HTML. To export the lap times of a run, click on Export lap times to file, which can be found under Publish tasks. Now the wizard will guide you through this process.

The lap times file can be exported in three different formats:

- txt file: The lap times are exported to a tab delimited text file.
- csv file: The lap times are exported to a comma delimited text file.
- html file: The lap times are exported to a html file.

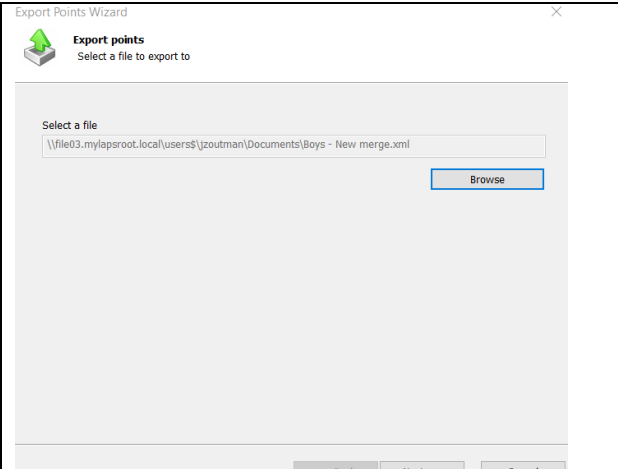

Section Info

This will export the section times per lap.

Passing Info

This will export the passing info

Championship tasks

7.1. Create a new championship

Orbits Cycling organizes the championship per season. The selected championship is displayed on the top of the screen.

A championship consists of many events. Combined these events will form a championship. There is no limit on the number of events per championship

Click on create a new championship

Fill in all details.

General

Name

Season

How should the championship be sorted?

Here you can choose how the championship should be sorted. There are two options:

Most points: The championship will be sorted on most points.

Least points: The championship will be sorted on least points.

In case of a tie - Tie solver

In case of a tie-on points Orbits offers the following Tie solvers:

Most 1, 2, 3 places per run: The competitor with the most 1st places will win. In case this is the same, it will look to the most 2nd places. Etc. It will look at the run results.

Most 1, 2, 3 places per event: The competitor with the most 1st places will win. In case this is the same, it will look to the most 2nd places. Etc. It will look at the event results.

Result of last run: The competitor with the best result in the last run will win.

Result of last event: The competitor with the best result in the last event will win.

Points of all events: The competitor with the best points for an event will win

Points of last event: The competitor with the best amount of points in the last event will win

Points of last run: The competitor with the best amount of points in the last run will win

Multiloop race

Green Flag

If you click on the green flag, the racers will race on the simulation screen.

Finsh Flag

If you click on the finish flag the racers will start again

Stop

If you click on stop the racers will stop. If you click again, the racers will continue.

+ and –

You can change the level of speed; 0.25/0.50/1.0/2.0/4.0

If you simulate your course, all details will show.

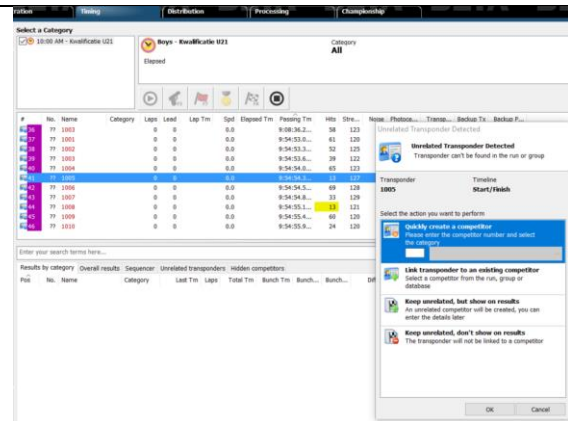

If you have an unrelated transponder detected, you can select the following actions:

Quickly create a new competitor

Link transponder to an existing competitor

Keep unrelated, but show on results

Keep unrelated, don't show on results.

Options

In this section, you change the settings of:

General
Formatting style
Timing
Run defaults
Category defaults
Endurance features

An overview of the basic settings

General:

You can add data field names

Formatting style:

Results formatting style

- Default
- UCI
- Australia

Truncate times, show up to:

Thousandths, hundredths, tenths, seconds, minutes, hours.

Timing:

You can mark riders that did not finish (DNF)

- Mark as DNF
- Mark as DNF and move to the bottom

In case of ties on best lap, look at

- The second-best lap times.
- Who sets the best lap time first.

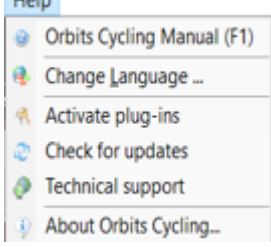

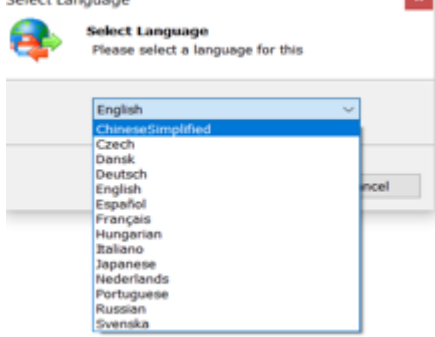

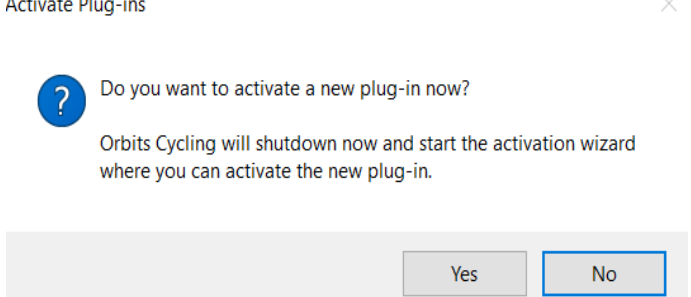

Enable bunch finish time (timing and merging)

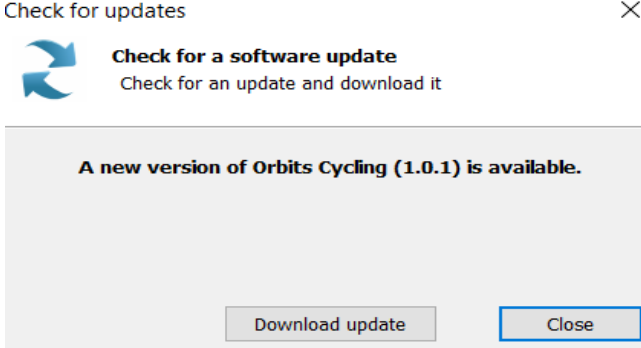

In Run defaults, category defaults, you can edit the run and category.

You can enable endurance features.

<p>About Orbits Cycling</p> <p>Here you can find all details about your Orbits Cycling software</p>	

9. Appendices

9.1. Appendix A – Photocells

For backup purposes photocells and manual time keeping can be used. The photocells can be connected to the decoder. The decoder is triggered each time the light beam of the photocell is interrupted. The transponder and photocell inputs can be related to each other. Note that in Orbits the transponder system is used as primary system and therefore the transponder time is taken for timing and scoring.

When the hardware system is set up properly, the detection loop is located before the actual finish line, in that way that the transponder is in the middle of the detection loop when the front of the vehicle is crossing the finish line.

For a correct match of transponder- and photocell passing times (lap times are not affected) the photocell should be positioned at the finish line. When positioning of the photocells is not possible, the extra time difference should be calculated in the maximum transponder, photocell time separation. Make sure that when the photocells are installed, the batteries are full and that the photocells are aligned and switched on.

Setting Photocell delay

Each photocell transmitter is equipped with a selector switch for setting the photocell delay. This time defines the maximum interval between two interruptions of the light beam that will be considered as one interruption. This setting is, among others, to avoid multiple interruptions of the light beam generating multiple photocell hits.

Connecting Photocells to the decoder

Photocells are connected via a MYLAPS photocell interface cable to the auxiliary port of the MYLAPS decoder. Please refer to the hardware manual of your system for the exact pin specification of the auxiliary connector. For backup purposes photocells and manual time keeping can be used. The photocells can be connected to the decoder. The decoder is triggered each time the light beam of the photocell is interrupted. The transponder and photocell inputs can be related to each other. Note that in Orbits the transponder system is used as primary system and therefore the transponder time is taken for timing and scoring.

When the hardware system is set up properly, the detection loop is located before the actual finish line, in that way that the transponder is in the middle of the detection loop when the front of the vehicle is crossing the finish line.

For a correct match of transponder- and photocell passing times (lap times are not affected) the photocell should be positioned at the finish line. When positioning of the photocells is not possible, the extra time difference should be calculated in the maximum transponder, photocell time separation. Make sure that when the photocells are installed, the batteries are full and that the photocells are aligned and switched on.

Setting Photocell delay

Each photocell transmitter is equipped with a selector switch for setting the photocell delay. This time defines the maximum interval between two interruptions of the light beam that will be considered as one interruption. This setting is, among others, to avoid multiple interruptions of the light beam generating multiple photocell hits.

Connecting Photocells to the decoder

Photocells are connected via a MYLAPS photocell interface cable to the auxiliary port of the MYLAPS decoder. Please refer to the hardware manual of your system for the exact pin specification of the auxiliary connector.

9.2. Appendix File Formats

Result file format

The exported results file contains the results of the competitors in the selected run.

Record layout

Depending on the selected file type the output file has the following record layout:

Txt file: - FIELD - <TAB> - FIELD - <cr/lf>

Csv file: - FIELD - <COMMA> - FIELD - <cr/lf>

Fields can be numeric or alphanumeric depending on the field. Fields separator is a comma "," (ASCII code 44 decimal) or a tab (ASCII code 9 decimal). Record separator is a carriage return (cr) plus linefeed(lf).

If you choose to export the selected columns the program will display the columns that are currently selected in the result screen.

Record format for qualify columns (run only) *Export format for a qualify result*

Pos	Finish position of the competitor, Numeric.
PIC	Finish position of the competitor in his category, Numeric. <i>(Only when show class column is on)</i>
No	Bike number of the competitor, Maximum 4, Alphanumeric.
Name	Name of the competitor, Alphanumeric.
Class	Category of the competitor, Alphanumeric. <i>(Only when Show class column is on)</i>
Best Tm	Best lap time of the competitor, Floating point with 3 decimal places.
Best Spd	Average speed of best lap
In Lap	Lap the best lap time was set, Numeric.
Diff	Differential time or laps of the competitor with the leader, Floating point with 3 decimal places or numeric.
Gap	Differential time or laps of the competitor, Floating point with 3 decimal places or numeric.
2 nd Best Tm	2 nd Best lap time of the competitor, Floating point with 3 decimal places.
2 nd Best Spd	Average speed of 2 nd best lap
2 nd In Lap	Lap the 2 nd best lap time was set, Numeric.
Car Reg	Bike registration number of the competitor
Additional Data 1	Additional data 1 of the competitor, Alphanumeric.
Additional Data 2	Additional data 2 of the competitor, Alphanumeric.
Points	Points the competitor received, Numeric. <i>(Only when Show points column is on)</i>

Sample

Pos<TAB>PIC<TAB>No<TAB>Name<TAB>Class<TAB>Best Tm<TAB>Best Spd<TAB>In
Lap<TAB>Diff<TAB>Gap<TAB>2nd Best<TAB>2nd Spd<TAB>2nd Lap<TAB>Car/Bike Reg<TAB> Additional
1<TAB> Additional 2<TAB>Points<cr/lf>

Record format for race columns (run only)

Export format for a race result

Pos	Finish position of the competitor, Numeric.
PIC	Finish position of the competitor in his category, Numeric. <i>(Only when show class column is on)</i>
No	Bike number of the competitor, Maximum 4, Alphanumeric.
Name	Name of the competitor, Alphanumeric.
Class	Category of the competitor, Alphanumeric. <i>(Only when Show class column is on)</i>
Laps	The number of laps of the competitor, Numeric.
Total Tm	Total race time of the competitor, Floating point with 3 decimal places.
Diff	Differential time or laps of the competitor with the leader, Floating point with 3 decimal places or numeric.
Gap	Differential time or laps of the competitor, Floating point with 3 decimal places or numeric.
Avg Spd	Average speed of race
Best Tm	Best lap time of the competitor, Floating point with 3 decimal places.
Best Spd	Average speed of best lap
In Lap	Lap the best lap time was set, Numeric.
Car Reg	Bike registration number of the competitor
Additional Data 1	Additional data 1 of the competitor, Alphanumeric.
Additional Data 2	Additional data 2 of the competitor, Alphanumeric.
Points	Points the competitor received, Numeric. <i>(Only when Show points column is on)</i>

Sample

Pos<TAB>PIC<TAB>No.<TAB>Name<TAB>Class<TAB>Laps<TAB>Total Tm<TAB>Diff<TAB>Gap<TAB>Avg.
Speed<TAB>Best Tm<TAB>Best Spd<TAB>In Lap<TAB>Car/Bike Reg<TAB>Additional 1<TAB>Additional
2<TAB>Points

Record format for qualify columns (merge only) Export format for a merged qualify result

Pos	Finish position of the competitor, Numeric.
No	Bike number of the competitor, Maximum 4, Alphanumeric.
Name	Name of the competitor, Alphanumeric.
Class	Category of the competitor, Alphanumeric. <i>(Only when Show class column is on)</i>
Overall Best Tm	Overall best lap time of the competitor, Floating point with 3 decimal places.
In session	The name of the session the best lap time was set. For each session in the merge the following column(s) will be included
Best Tm	Best lap time of the competitor in this session, Floating point with 3 decimal places.
2 nd Best Tm	2 nd Best lap time of the competitor in this session, Floating point with 3 decimal places.
Car Reg	Bike registration number of the competitor
Additional Data 1	Additional data 1 of the competitor, Alphanumeric.
Additional Data 2	Additional data 2 of the competitor, Alphanumeric.
Points	Points the competitor received, Numeric. <i>(Only when Show points column is on)</i>

Sample with 3 runs in the merge

Pos<TAB>No.<TAB>Name<TAB>Class<TAB>Overall BestTm<TAB>In Session<TAB>Best: Run 1<TAB>2nd: Run
1<TAB>Best: Run 2<TAB>2nd: Run 2<TAB>Best: Run 2<TAB>2nd: Run 2<TAB>Car/Bike Reg<TAB>Additional
1<TAB>Additional 2<TAB>Points

Record format for race columns (merge only) *Export format for a merged race result*

Pos	Finish position of the competitor, Numeric.
No	Bike number of the competitor, Maximum 4, Alphanumeric.
Name	Name of the competitor, Alphanumeric.
Class	Category of the competitor, Alphanumeric. <i>(Only when Show class column is on)</i>
Laps	The number of laps of the competitor, Numeric.
Total Tm	Total race time of the competitor, Floating point with 3 decimal places.
In Session	Session where the result was set
	For each session in the merge the following column(s) will be included
Laps	The number of laps of the in the specific run/merge, Numeric.
Car Reg	Bike registration number of the competitor
Additional Data 1	Additional data 1 of the competitor, Alphanumeric.
Additional Data 2	Additional data 2 of the competitor, Alphanumeric.
Points	Points the competitor received, Numeric. <i>(Only when Show points column is on)</i>

Sample with 3 runs in the merge

Pos<TAB>No.<TAB>Name<TAB>Class<TAB>Laps<TAB>Total Tm<TAB>In Session<TAB>Laps: Run
1<TAB>Laps: Run 2<TAB>Laps: Run 3 <TAB>Car/Bike Reg<TAB>Additional 1<TAB>Additional
2<TAB>Points<cr/lf>

Point columns for points (merge only) *Export format for a merged point result*

Pos	Finish position of the competitor, Numeric.
No	Bike number of the competitor, Maximum 4, Alphanumeric.
Name	Name of the competitor, Alphanumeric.
Class	Category of the competitor, Alphanumeric. <i>(Only when Show class column is on)</i>
Total Points	Total points, Numeric.
	For each session in the merge the following column(s) will be included
Points	Points for this session, Numeric.
Car Reg	Bike registration number of the competitor
Additional Data 1	Additional data 1 of the competitor, Alphanumeric.
Additional Data 2	Additional data 2 of the competitor, Alphanumeric.
Points	Points the competitor received, Numeric. <i>(Only when Show points column is on)</i>

Sample with 3 runs in the merge

Pos<TAB>No.<TAB>Name<TAB>Class<TAB>Total Points <TAB>Points: Run 1<TAB>Points: Run 2<TAB>Points:
Run 3 <TAB>Car/Bike Reg<TAB>Additional 1<TAB>Additional 2<TAB>Points<cr/lf>

Competitor file format

The competitor file contains competitors from a run, group or from the database.

Record layout

Depending on the selected file type the output file has the following record layout:

Txt file: - FIELD - <TAB> - FIELD - <cr/lf>

Csv file: - FIELD - <COMMA> - FIELD - <cr/lf>

Fields can be numeric or alphanumeric depending on the field. Fields separator is a comma "," (ASCII code 44 decimal) or a tab (ASCII code 9 decimal). Record separator is a carriage return (cr) plus linefeed(lf). Alphanumeric data is started and ended with quotes. The first line of the export file contains the header information.

Record format for competitor

No	Bike number of the competitor, Maximum 4, Alphanumeric.
Class	Category of the competitor, Alphanumeric. <i>(Only when Show class column is on)</i>
First name	First name of the competitor, Alphanumeric.
Last name	Last name of the competitor, Alphanumeric.
Car Reg	Car registration number of the competitor, Alphanumeric.
Driver Reg	Driver registration number of the competitor, Alphanumeric.
Transponder 1	1 st transponder number, can be numeric or Alphanumeric.
Transponder 2	2 nd transponder number, can be numeric or Alphanumeric.
Additional Data 1	Additional data 1 of the competitor, Alphanumeric.
Additional Data 2	Additional data 2 of the competitor, Alphanumeric.
Additional Data 3	Additional data 3 of the competitor, Alphanumeric.
Additional Data 4	Additional data 4 of the competitor, Alphanumeric.
Additional Data 5	Additional data 5 of the competitor, Alphanumeric.
Additional Data 6	Additional data 6 of the competitor, Alphanumeric.
Additional Data 7	Additional data 7 of the competitor, Alphanumeric.
Additional Data 8	Additional data 8 of the competitor, Alphanumeric.

Sample

```
"No"<TAB>"Class"<TAB>"FirstName"<TAB>"LastName"<TAB>"CarRegistration"<TAB>"DriverRegistration"<TAB>
"Transponder1"<TAB>
"Transponder2"<TAB>"Additional1"<TAB>"Additional2"<TAB>"Additional3"<TAB>"Additional4"<TAB>"Addition
al5"<TAB>"Additional6"<TAB>
"Additional7"<TAB>"Additional8"</lf>"
```

Groups and Runs file format

The groups and runs file contains competitors from a run, group or from the database.

The 3rd party import allows 3rd party software to import groups runs and competitors via an XML file. The XML file should be utf-8 encoded.

The following sections describe how the XML file should be formatted.

Prolog

The XML file should be preceded by the following prolog.

```
<?xml version="1.0" encoding="utf-8"?>
```

XML basic structure

The XML document should contain the "groups" root node and the attributes listed below.

Elements	Description	Number
groups	The root element	1
group	Group	0..*
competitors	Group of competitors	1
runs	Group of runs	1
run	Run element, a practice, qualify or race	0..*
competitor	Competitor, a participant	0..*

Example:

```
<groups>
<group name="MX1" description="test">
  <competitors>
    <competitor no="12" class="MX1" registration="033133"/>
    <competitor no="19" class="MX1" registration="033153"/>
  </competitors>
  <runs>
    <run name=" Free Practice" date="12-03-2009" time=" 16:00"/>
  <competitors>
    <competitor no="12" class="MX1" registration="033133"/>
    <competitor no="19" class="MX1" registration="033153"/>
  </competitors>
  <run name=" Qualify" date="12-03-2009" time=" 17:00"/>
  <run name=" Race" date="12-03-2009" time=" 17:00"/>
</runs>
</group>
</groups>
```

Notes

For groups and runs, the name is the unique identifier. For competitors, the driver registration code is the unique identifier.

This means that if a group is imported already exists in the selected event, the program will update the group instead of creating a new one. The same applies for runs and competitors.

Attribute explanation

name	Bold	Means Unique identifier
name	Normal	Means Required field
<i>name</i>	<i>Italic</i>	<i>Means optional field</i>

Element	Attributes	Values	Description	Example
group	name	string	The name of the group	<i>MX1</i>
	<i>description</i>	string	Description of the group	<i>All MX1 sessions</i>
run	name	string	The name of the session	<i>10cc practice</i>
	shortname	string	The venue (or short name) of the	<i>10p</i>
	date	date (yyyy-mm-dd)	session	<i>2009-01-01</i>
	time	time (hh:mm)	The date the session starts	<i>12:00</i>
	type	time (hh:mm)	The time the session starts	<i>qualify</i>
		<i>options:</i>	The type of session	
		practice,	Practice session	
		singlecarqualify,	Single car qualifying session	
		qualify,	Qualifying session	
		race	Race session	
	<i>startmethod</i>			<i>flag</i>
		<i>options:</i>	Session start method	
		flag,	Start race on the green flag	
		firstpassing,	Start the race on the first S/F	
	<i>minimumlaptime</i>	staggered	passing	<i>01:00</i>
	<i>countfirst</i>	time (mm:ss)	Staggered start	<i>none</i>
		<i>options:</i>	The minimum lap time	
		none,	Count first passing as	
		lap,	Do not count first passing on S/F	
	<i>stopclockred</i>	laptimefromgreen	Count first passing	<i>true</i>
	<i>countlapsred</i>	boolean	Count lap time from green flag to	<i>false</i>
	<i>copyfromgroup</i>	boolean	first passing on S/F	<i>true</i>
	<i>autofinishmethod</i>	boolean	Stop the race clock during red	<i>timeorlaps</i>
		<i>options:</i>	flag if true	
		none	Count laps during red flag if true	
		time	Copy competitors from group in	
		laps	case of unrelated transponders	
		timeandlaps	Auto finish after	
		timeorlaps	Don't use auto finish	
	<i>autofinishtime</i>	individualontime	Completing race time (of leader)	<i>00:15:00</i>
	<i>autofinishlaps</i>	individualonlaps	Completing a number of leader	<i>10</i>
	<i>qualificationtype</i>	time (hh:mm:ss)	laps	<i>max-positions</i>
		integer	Completing race time and a	
		<i>options:</i>	number of laps	
		none	Completing race time or a	
		max-position	number of laps	
		max-best-laptime	Completing individual race time	
		max-avg-best-laptime	Completing a number of	
		laptime	(individual) laps	
		min-laptime	The race time of this session	
		min-leader-laps-	The race distance of this session	
	<i>qualificationvalue</i>	up		<i>107,3</i>
		min-leader-laps-	Don't use the qualification type	<i>107</i>
		down	Max. Number of competitors (all	
		min-laps	sessions types)	
		string	Max. percentage of best lap time	
			(practice, qualify)	
			Max. percentage of avg. best lap	
			time top x (practice, qualify)	

			Minimum lap time (practice, qualify) Min. percentage of total leader laps rounded up (race) Min. percentage of total leader laps rounded down (race) Min. number of laps (race) Depends on the qualification type: Time (mm:ss.nnn) in case of min-lap time Number (%), number (top x) in case of max-avg-best-lap time Number (% competitors, laps) for other requirement types	
competitor	no	integer	The competitor number	1
	driverregistration	string	The unique driver registration	123456
	registration	string	The unique registration	123456
	class	string	Competitor class	Juniors
	firstname	string	Competitor first name (or team name in case of driver id)	John
	lastname	string	Competitor last name	Doe
	points	integer		42
	transponders	list	The points of this competitor	123456, AA-
	drivers	list	A comma separated list of transponders	12345
	additional1	string	A comma separated list of drivers	John Doe, Max
	additional2	string	Free text field	
	additional3	string	Free text field	
	additional4	string	Free text field	
	additional5	string	Free text field	
	additional6	string	Free text field
